AI Value Intelligence

Measure adoption. Prove value. Optimize AI investment.

> *"The AI gold rush is over. The audit has begun." This product is that audit, built and working.*

THE INTENT

Give client leadership a clear and defensible answer to one question: **is our AI investment paying back, and where should the next dollar go?** And give us a working product, not a slide, that turns our AI value point of view into client conversations and paid engagements.

THE PROBLEM

Every enterprise bought the licenses. Few can prove the return. Dashboards count prompts, active users and hours saved, yet none of these is ROI.

THE SOLUTION

A platform that follows every AI dollar through to realized value, then tells leadership what to scale, fix or stop.

THE APPROACH

Keep potential, demonstrated and realized value separate. Count only realized value, measured against the **full** cost of AI, use case by use case.

How the product thinks

Potential	What a use case could deliver on paper.
Demonstrated	Improvement we can evidence in operations.
Realized	Benefit actually captured. The only tier in ROI.

THE VALUE CHAIN IT MEASURES

INVESTMENT → ADOPTION → USAGE → OPS GAIN → DEMONSTRATED → REALIZED → ROI

EVERY USE CASE GETS A DECISION

SCALE | OPTIMIZE | MONITOR | REASSESS | STOP

What it does today

- **Executive overview:** spend against realized value, ROI, payback and value leakage.
- **Full cost of AI:** licenses, infrastructure, implementation, training, support, security and governance.
- **License optimization:** finds unused, underused and overlapping seats.
- **Portfolio view:** ROI by business unit and by use case.
- **Forecasts and a scenario simulator** to test investment choices.
- **Open methodology:** every formula explained and searchable, on desktop or mobile.

How it becomes useful to each leader

CEO / MD
Where is AI creating value, and where should we invest next?

CFO
What is the real return against the full cost, and when do we pay back?

CIO / CTO
Which licenses are idle, and what can we reclaim or right size?

CHIEF AI OFFICER
Which use cases to scale, and which to stop?

BUSINESS HEADS
Is AI improving my unit's results, not just its activity?

How we can take it to clients: a ready product we tailor, not a custom build

STEP 1 · DIAGNOSTIC
AI Value Health Check
Connect client license, usage, cost and finance data. Baseline adoption, ROI, value leakage and idle licenses.

STEP 2 · PROGRAM
AI Value Realization Office
Run the use case portfolio as an investment portfolio. Stage gates, business owners, scale the winners, stop the rest.

STEP 3 · MANAGED SERVICE
Continuous AI Value Reporting
Recurring executive and board reporting on AI return, refreshed as tools, pricing and usage change.

Timely
Middle East boards have moved past Copilot pilots and now want proof of return.

Low cost to deliver
One reusable engine. Branding, data sources and KPIs adjust per client.

Differentiated
Turns our AI value thought leadership into a tool clients can use.

Credible
Never treats prompts, hours saved or adoption as ROI.
